

With the advent of the future era- Metaverse,  
The transition between virtual and reality is no longer a fantasy or dream

Refraction occurs through the migration of light,  
In order to let people see different colors.

The countless-changing colors appear on the appearance at the same time,  
Combining metallic effects with light distortions  
The brilliance of science fiction has gone from the virtual world to the real scene~

San Fang's surface effect technology makes fantasy come true and fulfil the imagination of future

Let's take a look at the surface effect of 24SS catalog with card no. S2407~
