

The carbon reduction caused by CBAM & sustainability are the major issues of global concerns, which is unavoidable for enterprises.

At this stage, the materials with high proportion of bio contents, which with high price/poor physical properties/many development restrictions...even though the carbon reduction effectiveness is good, but the high cost were not acceptable by the customers !

San Fang fully consider about customer sustainability policies and consumer demands...

We're using "light weight biomass ratio" and combined with recycle fiber base (including rPET Non-Woven /rNylon microfiber/rPET stretchable knitting woven/ Recycled TPU film...etc...) to create a series of "Mild Bio" series materials.

No need to give up on the demands for fashion...

No need to give into the limitation of material property/shoe making process

No need to worry about excessive carbon emissions...

No need to mention about the burden of the price...

MildBio

Mild Bio content

Mild Bio series material is your Best Value & Price option!

More material information (Including Bio ratio testing report)...
